MM Prestige Motors

Website & dealership tools

Customer website

Telegram stock assistant

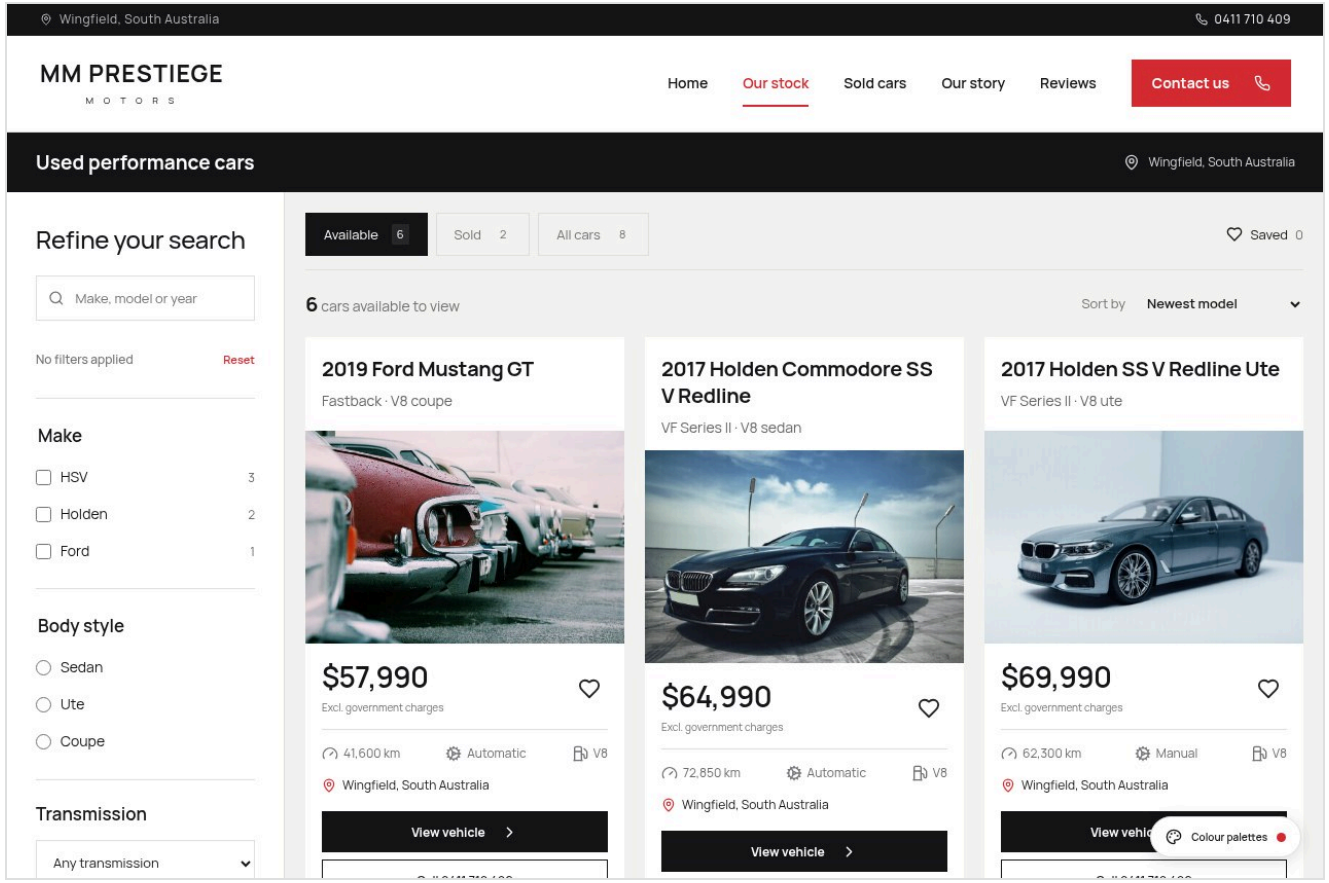

Customer CRM

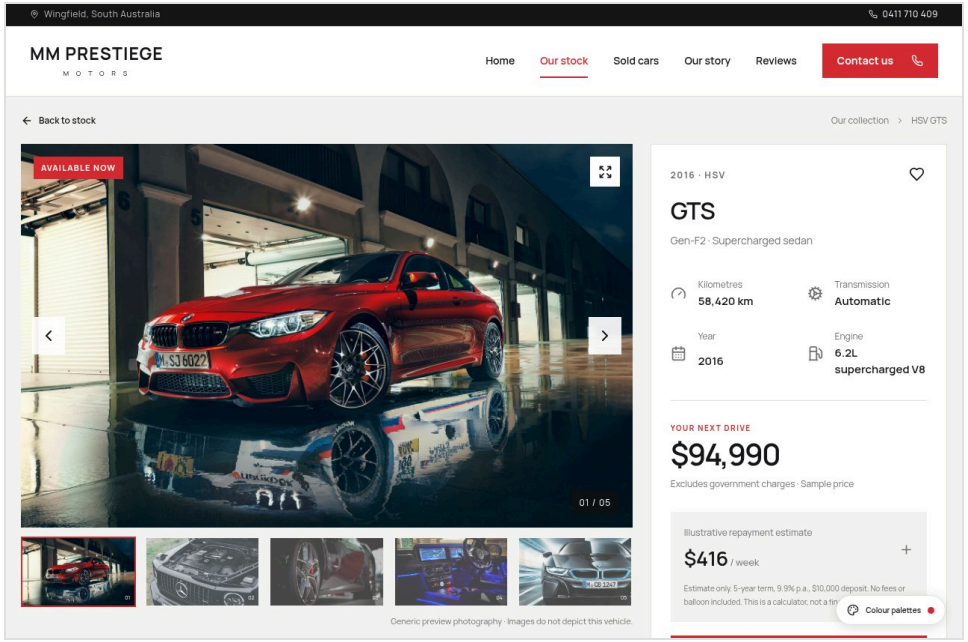

The website stock page.

The website

Browse the cars, check the details and get in touch.

Search by car and filter by make, body style or transmission.

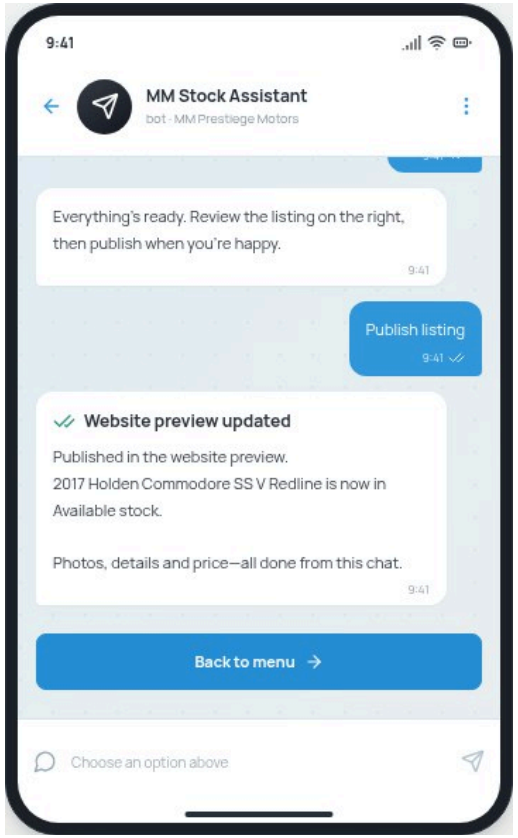

Each car has its own page with photos, specifications and an asking price. Customers can enquire, call or find the showroom.

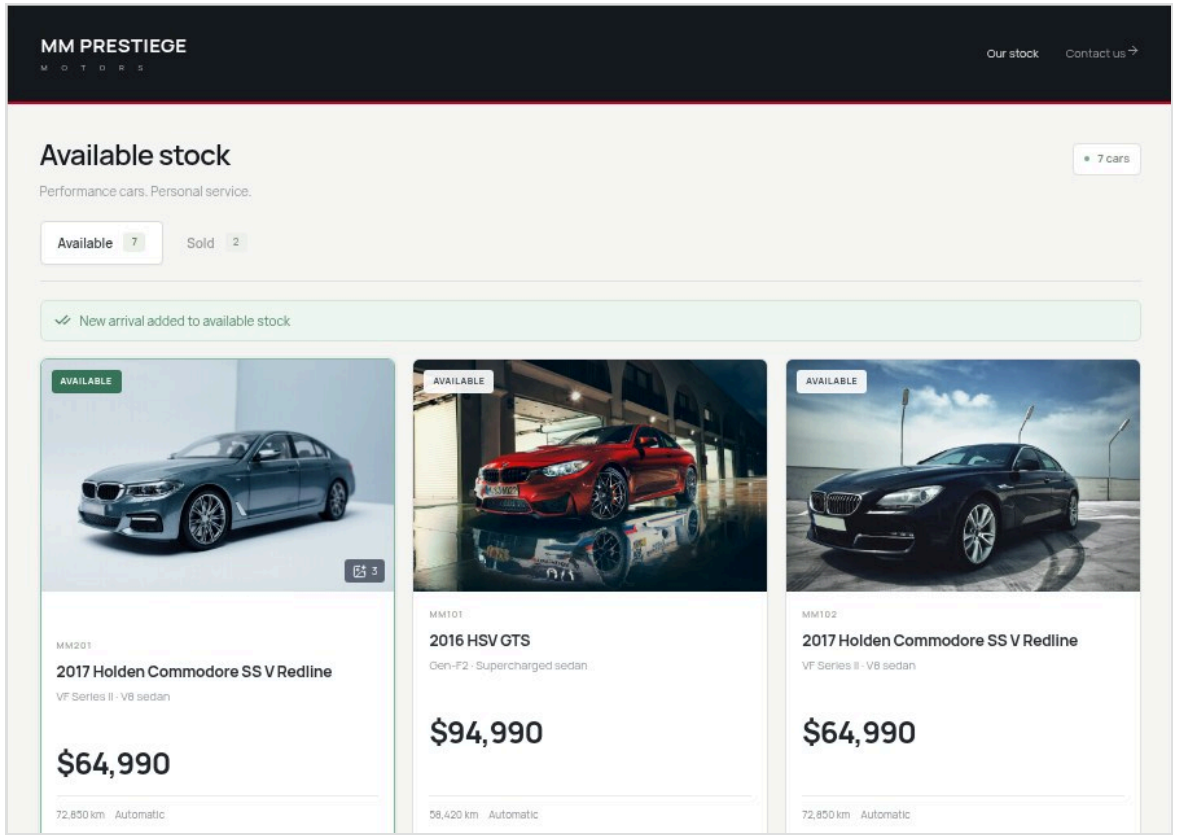

Manage stock from Telegram

A menu on your phone for new arrivals, listing changes and sold cars.

Telegram conversation

The listing preview

Add new vehicle

Send photos, enter the rego and state, then confirm the details, kilometres and price.

Update listing

Change the photos or details and check the result before saving.

Mark vehicle sold

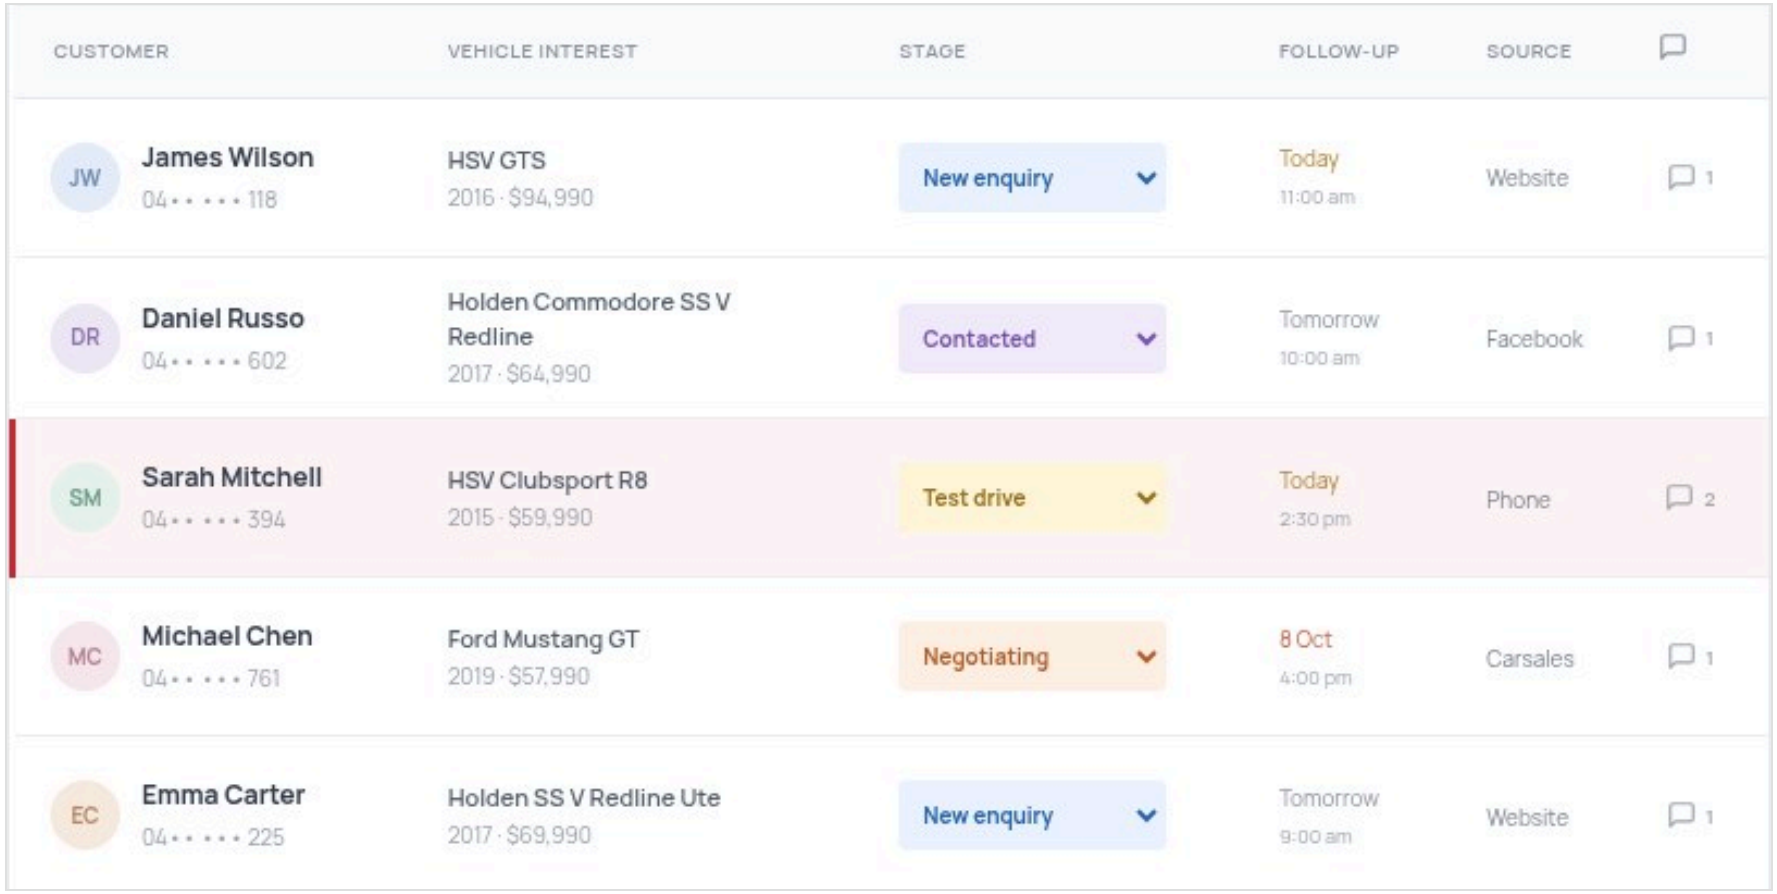

Choose the car and confirm the sale to move it out of available stock.

The demo shows the conversation and its result side by side.

Telegram stock assistant

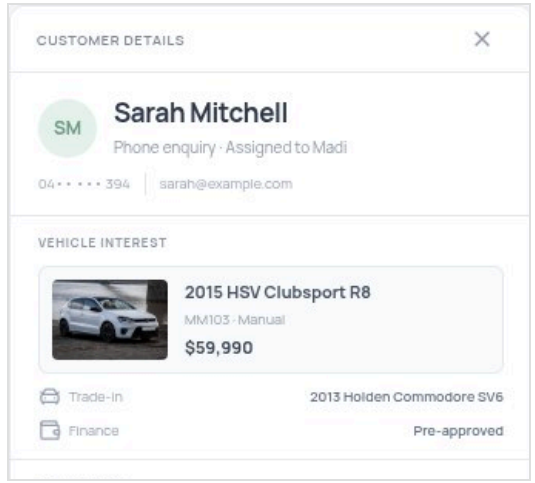

Customers and comments

Keep the customer, the car and the next conversation together.

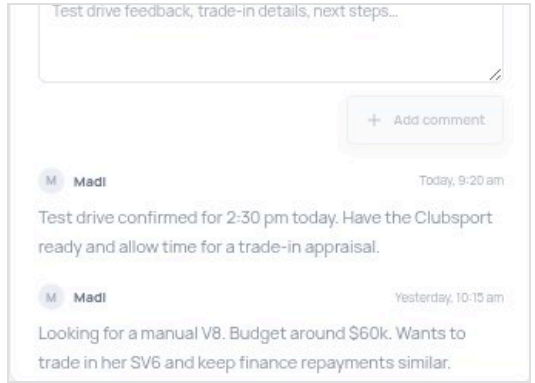

Search customers, filter stages and set the next follow-up.

Selected customer

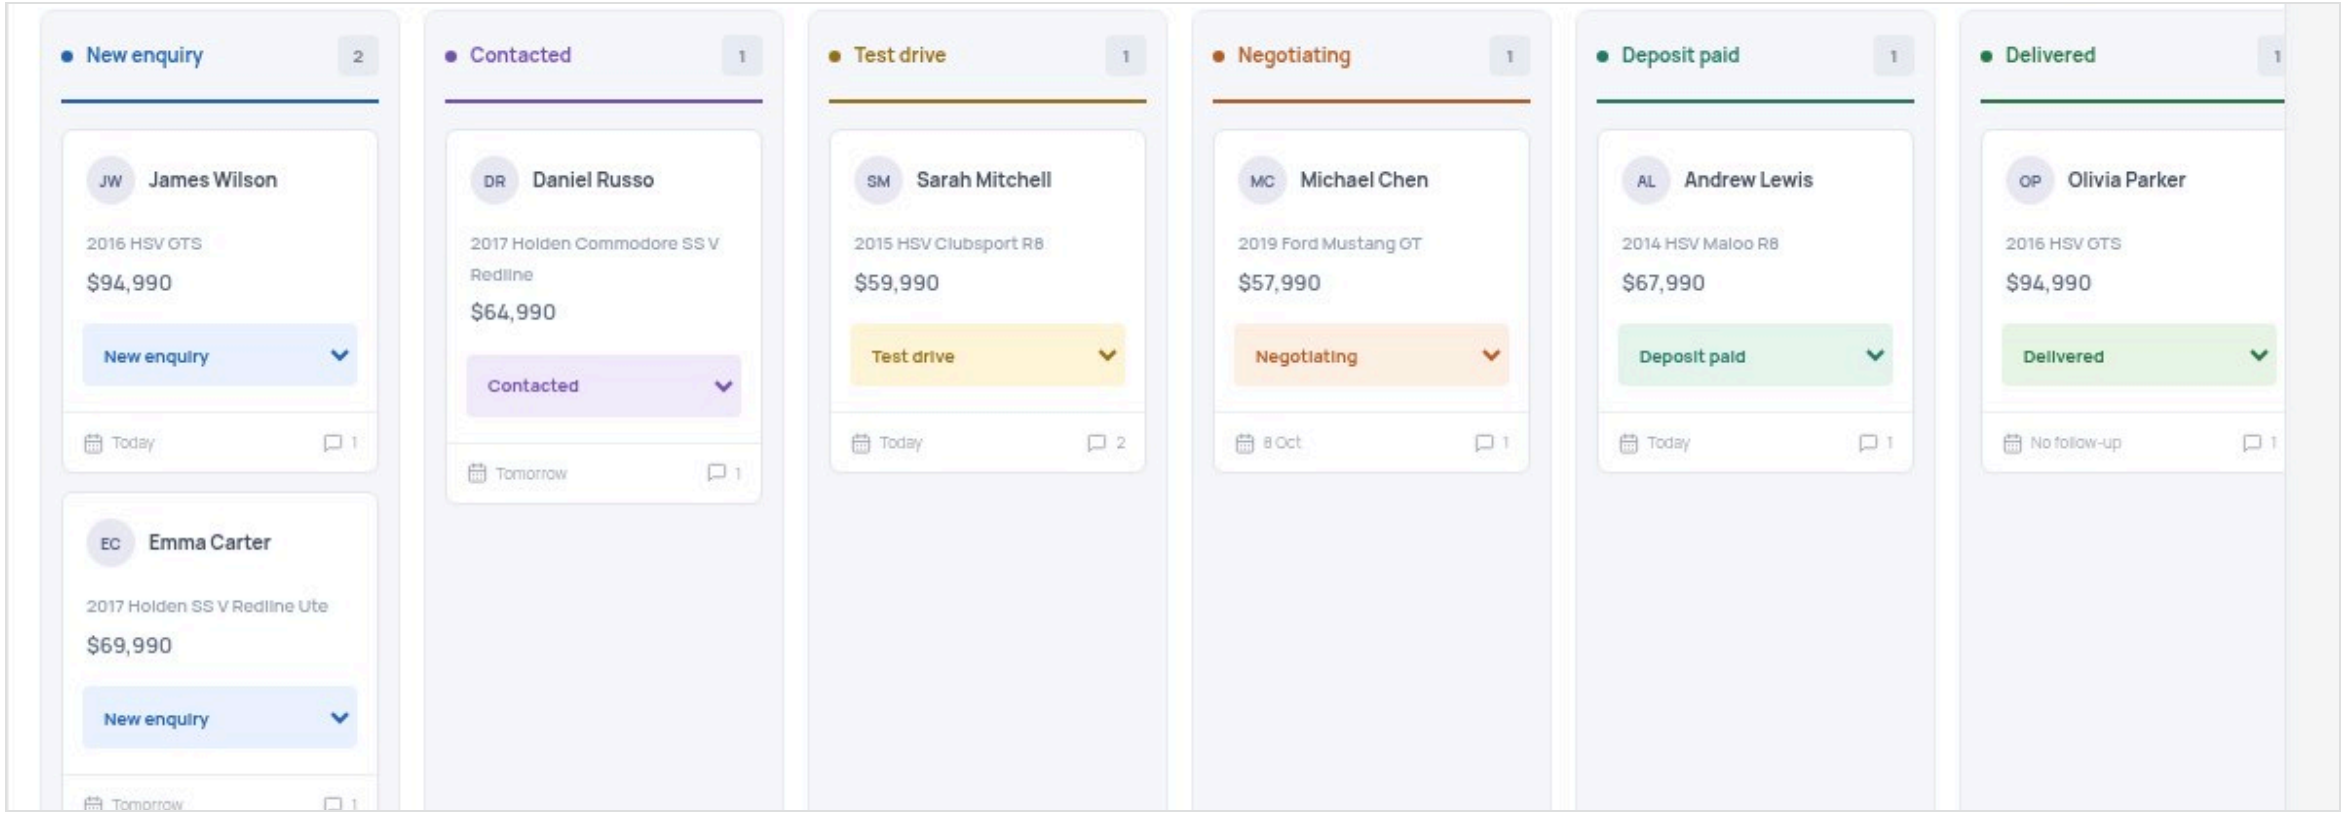

Comments and conversation history

The sales pipeline

See which enquiries need a call, a test drive or a decision.

Drag a customer to another stage, or use the stage dropdown.

The customer list stays in sync.

New enquiry → Contacted → Test drive → Negotiating → Deposit paid → Delivered · Lost

What we do next

Review the previews, then choose what to put into daily use first.

Ready to review

Website: stock browsing and vehicle pages.

Stock assistant: add, update and sold workflows.

CRM: customers, stages, comments and follow-ups.

The previews use sample vehicles and customers. Stock and CRM demo changes reset on refresh.

To make it live

Use dealership photos and verified vehicle details.

Connect Telegram, a vehicle lookup provider and the website stock database.

Save customer records, add staff access and connect agreed enquiry sources.

Which should we tackle first: stock management or leads?
